Kamesh S

DevOps Engineer | AWS | Kubernetes | Terraform | Observability

Chennai, India | +91 9360458131 | kameshjustin11@gmail.com | LinkedIn | GitHub | Certificate Portfolio

SUMMARY

DevOps Engineer with 1 year of production experience deploying and managing cloud-native microservices applications on AWS. Skilled in CI/CD automation, Kubernetes orchestration, infrastructure provisioning, monitoring, and security. Hands-on experience with Jenkins, Docker, Kubernetes, Terraform, Ansible, HashiCorp Vault, Prometheus, Grafana, and AWS services including EC2, VPC, S3, CloudFront, API Gateway, and EKS. Passionate about building scalable, secure, and reliable cloud infrastructure through automation and DevOps best practices.

PROFESSIONAL EXPERIENCE

Junior DevOps Engineer 10/2025 | Chennai, TN
Kiaq Technologies Pvt Ltd

- **Project: Locate 360 — Microservices-based Booking Platform**
  Locate 360 is a user-friendly booking application built on a microservices architecture. Responsible for end-to-end DevOps lifecycle — infrastructure provisioning, CI/CD automation, container orchestration, security, and observability.
- **CI/CD & Automation** - Designed and maintained Jenkins pipelines with webhook-based automatic triggers on GitHub push events, enabling continuous integration for all microservices. Integrated SonarQube quality gates into Jenkins pipelines to block deployments on code quality failures, improving overall code health.
- **Cloud Infrastructure (AWS)** - Provisioned and managed EC2 instances, VPCs, subnets, and security groups for the Locate 360 staging and production environments Configured CloudFront CDN with S3 for static asset delivery, improving frontend performance and content delivery. Set up API Gateway to expose and manage microservice APIs with rate limiting and authentication integration.
- **Security & Secrets Management** - Implemented HashiCorp Vault for centralized secrets management, eliminating hardcoded credentials across all microservices and Jenkins pipelines. Enforced Docker image security scanning via Harbor to detect and remediate vulnerabilities before production deployment.
- **Monitoring & Observability** - Deployed Prometheus to collect metrics from all Kubernetes pods and AWS infrastructure components. Built Grafana dashboards for real-time monitoring of CPU, memory, pod health, and request latency across microservices. Configured alerting rules in Prometheus/Grafana for proactive incident detection and notification.
- **Scripting & Automation** - Wrote Python and Shell scripts to automate routine DevOps tasks including log rotation, health checks, and deployment validation. Provisioned and managed AWS infrastructure using Terraform, including EC2, VPC, Subnets, Route Tables, Security Groups, and networking configurations.

ACHIEVEMENTS

- Awarded Employee of the Month (April 2026) for outstanding contribution to CI/CD automation, cloud infrastructure management, and DevOps operations.

PROJECTS

Eflow | MERN Stack Application 01/2026 – 02/2026

- Eflow is a full-stack MERN application where I handled end-to-end DevOps infrastructure across all layers. Hosted React frontend on AWS S3 with CloudFront CDN and IAM access controls, containerized Node.js backend using Docker and deployed on AWS EC2 via SSH, automated build and deployment pipelines using Jenkins CI/CD, and managed the database using MongoDB Atlas cloud cluster with secure network configuration.

CERTIFICATIONS

- DevOps Beginners to Advanced: Decoding DevOps with Projects
  Udemy | November 2022

- Introduction to Cloud
  IBM Developer Skills Network (ICT Academy) | September 2022

SKILLS

Operating Systems	:	Linux (Ubuntu)
Networking	:	TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, VPC, Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups, NACL, Application Load Balancer (ALB), Elastic IP
CI/CD & GitOps	:	Jenkins, GitHub Actions, GitLab CI/CD, Argo CD
Cloud (AWS)	:	EC2, AWS IAM, S3, CloudFront, API Gateway, ECS, ECR, Fargate, AutoScaling, CloudWatch, EKS
Containers & Orchestration	:	Docker, Docker Compose, Kubernetes, Helm, Harbor
Infrastructure as Code	:	Terraform, Ansible
Security (DevSecOps)	:	HashiCorp Vault, Trivy, SonarQube
Monitoring	:	Prometheus, Grafana, Loki, Alertmanager, Datadog
Scripting	:	Bash, Shell Scripting, Python, YAML
Web Server	:	Nginx
Version Control	:	Git, GitHub

EDUCATION

BE (CSE), CGPA: 8.04 | Sri Balaji Chockalingam Engineering College 07/2019 – 06/2023 | Arni
